

A typical **requirements.txt** for a Smart Lender data analytics and machine learning project includes libraries for data processing, visualization, model building, and model persistence.

Here is a suitable example:

```
pandas==2.2.3
numpy==2.2.1
matplotlib==3.10.0
seaborn==0.13.2
scikit-learn==1.6.1
scipy==1.15.1
xgboost==2.1.4
lightgbm==4.5.0
joblib==1.4.2
openpyxl==3.1.5
xlrd==2.0.1
jupyter==1.1.1
notebook==7.3.2
ipykernel==6.29.5
plotly==5.24.1
streamlit==1.41.1
imbalanced-learn==0.13.0
```

This set of dependencies supports:

- Data loading and preprocessing (pandas, numpy)
- Visualization (matplotlib, seaborn, plotly)
- Machine learning (scikit-learn, xgboost, lightgbm)
- Handling imbalanced datasets (imbalanced-learn)
- Excel file support (openpyxl, xlrd)
- Saving trained models (joblib)
- Interactive development (jupyter, notebook, ipykernel)
- Building a simple web application (streamlit)
