

Smart Lender – Applicant Credibility Prediction for Loan Approval academic project, the typical **model files** included after training are:

Smart-Lender/

```
|
|
|— models/
|   |— loan_model.pkl
|   |— scaler.pkl
|   |— label_encoder.pkl
|   |— onehot_encoder.pkl
|   └— feature_columns.pkl
|
|— dataset/
|   └— loan_prediction.csv
|
|— notebooks/
|   └— model_training.ipynb
|
|— app.py
|— train.py
|— requirements.txt
└— README.md
```

The trained model file is usually one of these formats:

- loan_model.pkl (Joblib/Pickle)
- loan_model.joblib
- loan_approval_model.pkl

Common algorithms used in Smart Lender projects include:

- Decision Tree
- Random Forest
- Naive Bayes

- K-Nearest Neighbors
- Logistic Regression

The published Smart Lender project documentation describes training multiple models (such as KNN, Decision Tree, and Naive Bayes) and then evaluating and saving the best-performing model for deployment.

If you need the **actual .pkl model files**, tell me which of these you want:

1. Random Forest model (loan_model.pkl)
2. Decision Tree model (decision_tree.pkl)
3. KNN model (knn_model.pkl)
4. Naive Bayes model (naive_bayes.pkl)
5. Complete Smart Lender project with trained model files and source code

I can also help you generate the model files from the dataset if you have the training data.
